

AMERICAN PETROLEUM INSTITUTE

NOT ONLY DO WE KNOW THE **API STANDARDS.**
WE WROTE THE BOOK!

We design our fans
with **YOU** in mind

AMERICAN PETROLEUM INSTITUTE

The Problem:

Oil and natural gas are the cornerstone of our economy. Together they supply more than 60 percent of our nation's energy. In order to meet the market demand, and adhere to stringent regulations, the petroleum industry requires some of the toughest regulations in industry. Many fan companies cannot meet the stringent testing and manufacturing standards that API requires.

The Solution:

As America's largest fan manufacturer, Clarage takes pride in leading the way in the API market. We know the API standards because we help write them. Clarage engineers currently sit on the API 673 committees. That's why we built the largest fan testing facility in the U.S., we are able to conduct mechanical run test and performance test according to the AMCA standard. Our in-house facility will test fans using motors up to 4,000HP. When millimeters matter, and it has to be perfect, get a Clarage fan.

OVER 100 YEARS OF BEING TOUGH, CUSTOM AND PROVEN
