

**NEXT GENERATION
COAL MILL EXHAUSTER FAN**

NOTHING STANDS IN
OUR WAY TO
DELIVER PERFORMANCE

If you need **MORE PERFORMANCE,**
Call Clarage

NEXT GENERATION EXHAUSTER FAN

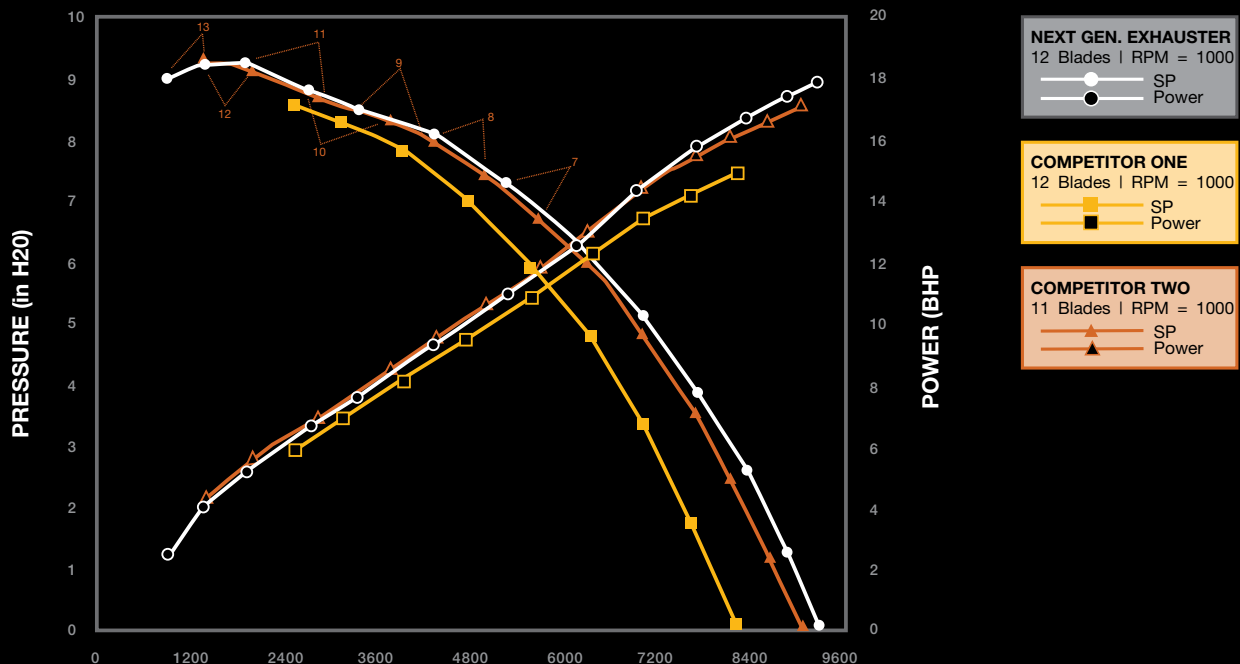

Clarage has designed and rebuilt coal exhausters for the past twenty years. Our engineers have developed both the High Efficiency Exhauster Fans, and the Next Generation Exhauster Fans. If you are making the switch to a lower BTU coal, such as Powder River Basin Coal, and you need more performance, call Clarage today.

Clarage can rebuild your existing exhauster, no matter the design, or OEM. Clarage can provide a bare exhauster, or one with tungsten tile cladding.

Clarage's Next Generation Exhauster was designed for higher performance, less pressure fluctuations, and easier maintainability. The parallel shroud design provides better fan performance as well as reduces the extreme wear on the tip of the blades.

"HIGHER EFFICIENCY = POWER SAVINGS"

With a more efficient coal mill exhauster, customers can increase capacity and save money.
